

CyberWall

SHIELD

A Comprehensive Integrated Cyber Threat Hunting and Protection Platform

What is CyberWallShield?

ENDPOINT SECURITY

- Malware Detection
- Configuration Assessment
- File Integrity Monitoring

CLOUD SECURITY RESPONSE

- Container Security
- Posture Security
- Workload Protection

THREAT INTELLIGENCE

- Threat Hunting
- Log Data Analysis
- Vulnerability Detection

SECURITY OPERATIONS

- Incident Response
- Regulatory Compliance
- IT Hygiene

Active XDR Protection for all Cyber Threats

The Extended Detection and Response (XDR) platform offers an all-encompassing security approach, capable of identifying, examining, and countering threats throughout various layers of IT infrastructure. Utilizing CyberWallShield, it aggregates telemetry from endpoints, network devices, cloud environments, third-party APIs, and additional sources, ensuring cohesive security monitoring and defense.

XDR Features & Capabilities

Automated Response

Minimize the typical incident response time using CyberWallShield's active response module.

Threat Hunting

Concentrate your analysts' efforts and reduce the time dedicated to analyzing telemetry from various security platforms.

Behavioral Analysis

Identify and address threats through the recognition of abnormal behavior patterns with CyberWallShield's behavioral analysis features.

Threat Intelligence

CyberWallShield utilizes threat intelligence feeds to identify and counteract recognized threats.

Compliance and Reporting

Fulfill regulatory compliance obligations, produce reports, and showcase the efficacy of your security strategy with CyberWallShield.

Cloud Workload Protection

Offer protective measures for your cloud workloads and containers with CyberWallShield. This tool is integrated with cloud services to gather and scrutinize telemetry data.

Managed Detection and Response (MDR)

Discover how CyberWallShield's authentic, around-the-clock Managed Detection and Response technology halts breaches by identifying early indicators of threats.

Integration With Third-Party Solutions

CyberWallShield enhances its ability to detect threats by incorporating third-party solutions and amalgamating telemetry from multiple sources for consolidated real-time log data analysis.

Universal Agent for Endpoint Protection

Install CyberWallShield's agent on your endpoints for effective detection and response to cyber threats.

A Comprehensive SIEM Solution

CyberWallShield's Security Information and Event Management (SIEM) solution serves as a centralized hub for gathering and examining telemetry in real time, aimed at detecting threats and ensuring compliance. It aggregates event data from diverse sources such as endpoints, network devices, cloud workloads, and applications, providing extensive security coverage.

SIEM Features & Capabilities

Security Log Analysis

Safeguard your infrastructure and adhere to regulatory standards through the surveillance and examination of endpoint actions. CyberWallShield compiles, preserves, and scrutinizes security event information to pinpoint irregularities or signs of security breaches

Vulnerability Detection

Identify vulnerabilities in monitored endpoints with the deployment of the CyberWallShield agent. CyberWallShield ranks these detected vulnerabilities to hasten your decision-making and remediation efforts.

Security Configuration Assessment (SCA)

Utilize the CyberWallShield Software Composition Analysis (SCA) feature to detect misconfigurations and security weaknesses within your infrastructure. CyberWallShield conducts scans of your systems using the Center for Internet Security (CIS) benchmarks.

Regulatory Compliance and Certifications

Streamline your compliance efforts with CyberWallShield. This tool assists in monitoring and evidencing adherence to a range of regulatory standards, including PCI DSS, NIST 800-53, GDPR, TSC SOC2, and HIPAA, simplifying the process of meeting regulatory mandates.

Alerting and Notifications

Get instant alerts and notifications upon the occurrence of security incidents with CyberWallShield. This system aggregates events across various sources, incorporates threat intelligence feeds, and offers tailor-made dashboards and reports for comprehensive oversight.

Reporting Insights from SIEM Events

Create detailed reports offering an in-depth analysis of security events with CyberWallShield. This tool enables the generation of extensive, practical information tailored to your specific requirements.

SHIELD

Our Mission

"CyberWallShield.com is dedicated to delivering cutting-edge cybersecurity solutions, ensuring relentless threat detection, swift response, and robust protection for businesses in an ever-evolving digital landscape."

About CyberWallShield

CyberWallShield is a pioneer in managed detection and response.

Our platform harnesses its specialized ecosystem to enable partners to effectively combat and conquer cyber threats.

Since 2014, we have been dedicated to protecting the community, continuously defending businesses worldwide with pride and diligence.

We firmly believe in collective strength against cyber challenges.

Our mission at CyberWallShield is to ensure that no one faces these battles alone.

Our team is committed to delivering integrated, nonstop detection services, strategically positioning you to preemptively strike against adversaries, often before they're aware of our presence.

Discover the CyberWallShield Approach

Our team, enriched with decades of practical cyber warfare experience and a profound understanding of hacker tactics, operates swiftly to neutralize even the most sophisticated threats.

In a landscape where you are constantly in the sights of attackers, CyberWallShield aims to remove the bullseye from your back, offering unwavering support and response to malicious cyber activities every second, every day of the year.

Leveraging our advanced XDR technology, we swiftly detain, isolate, and eradicate cyber threats from your network. Our expertise lies in identifying and neutralizing risks that others may overlook.

Rely on us to incapacitate adversaries before they have the opportunity to act, ensuring your digital environment remains secure and uncompromised.
